Professional Summary

Graduate with a B.Tech in **Computer Science and Business Systems**, combining analytical thinking with hands-on engineering. Strong in **SQL, Python, Power BI, Tableau and Excel**, with experience in data cleaning, EDA, KPI tracking and statistical anomaly detection. I take a business question from raw data to a clear answer: checking data quality, building the pipelines and APIs behind it, automating repetitive work with AI workflows, and explaining the **why behind a metric** to non-technical teams.

Education

Rajiv Gandhi Proudyogiki Vishwavidyalaya, Bhopal **June 2026**
B.Tech - Computer Science and Business Systems *Percentage : 87%*

Technical Skills

Languages & Tools: Python, SQL, JavaScript, TypeScript, Git/GitHub, Docker, Postman
Libraries & Databases: Pandas, NumPy, scikit-learn, PyTorch, LangChain, React.js, PostgreSQL, Supabase
BI & Visualization: Tableau, Advanced Excel, Google Sheets
Data Analysis: EDA, Data Cleaning, Data Validation, KPI Tracking, Statistical Analysis, Anomaly Detection
Automation & Backend: n8n, REST APIs, FastAPI, Zoho CRM

Experience

Maalibu Private Limited **May 2026 – Present**
AI Automation Intern (Full-time) *Remote*

- Built and tested AI workflows in **n8n and Python** for e-commerce and other clients: lead capture, follow-ups and order-status flows.
- Set up a lead flow: webhook intake, LLM (OpenAI/Gemini) intent classification, push to **HubSpot or Zoho CRM** with a sales alert.
- Worked with JSON, API authentication and Google Sheets/database integrations; tested flows across **50+ real-world scenarios** and debugged failed API calls and wrong AI outputs by fixing prompts and workflow logic.
- Maintained workflow documentation and worked with senior automation engineers to test and deploy client-specific automations.

VRG Private Limited **Dec 2025 – Mar 2026**
Backend Intern (Smart Meter Data Processing & Monitoring) *Bhopal*

- Developed and tested **REST APIs in Python (FastAPI)** on PostgreSQL/Supabase to receive meter readings and serve device and consumption data to dashboards and internal tools; tested with Postman, versioned in Git/GitHub.
- Validated incoming device data (readings, timestamps, device IDs, status), **approx. 5,000–8,000 records daily**; built checks for missing readings, duplicates, abnormal consumption and inactive meters.
- Tracked **approx. 200–400 faulty meters per month** for inspection or replacement; tuned queries with senior developers.
- Automated repetitive validation, cutting manual checking from **approx. 2–3 hours to about 1 hour a day**.

Projects

PicketIQ — Business Signal Investigation & Decision Intelligence Platform | Python, FastAPI, PostgreSQL, Next.js **2026**

- Built a platform that monitors **6 daily business KPIs** (orders, revenue, cancellations, delivery delay, etc.) on the Olist e-commerce dataset (**451K+ records**) using PostgreSQL, SQL window functions and CTEs.
- Flags anomalies ($|Z| \geq 3$) against a **14-day rolling baseline with volatility-adjusted Z-scores**, with no future-data leakage.
- Investigates each anomaly with three SQL diagnostics: state-wise segment breakdown, 8-week same-weekday seasonality check and 14-day trend regression. Traced the Black Friday 2017 spike (**+498% orders**, Z = 26.8) to Sao Paulo, which drove 38.4% of it.
- Added an LLM layer (OpenAI/Gemini) that writes the root cause and recommended action, with an audit step that checks every number it cites against database results; backed by **86 Pytest tests** and a Next.js/TypeScript dashboard.

PR Sentinel — Autonomous AI Code Review & Root Cause Platform | Python, FastAPI, LangGraph, PostgreSQL **2026**

- Built a GitHub PR review platform with **FastAPI, LangGraph and Groq LLMs**; the webhook acknowledges in under 50 ms.
- Designed a durable job queue (PostgreSQL/SQLite, SQLAlchemy, Alembic) with worker heartbeats, stale-job reclaim and lease fencing, so reviews survive restarts and are never posted twice.
- Built a six-step review pipeline (context retrieval, LLM analysis, diff-line validation, root-cause investigation, verdict, posting).
- Checks every generated comment against real diff lines before posting and publishes one consolidated GitHub review per PR; covered by **113 automated tests**.

Achievements & Certifications

Certifications: Google Advanced Data Analytics | Oracle Agentic AI Associate | CS50 Python (HarvardX)
Achievements: ICPC Regionalist 2025 (Rank 445) | Hackloop Hackathon 2025 (Top 10) | 300+ LeetCode problems solved
